DETAILED ACTION

Claim Objections

Claims 4-9 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from a following claim, i.e., does not depend from a preceding claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

The claims would not be understood, because for example claims 4 and 5 refer to "X" whereas claim 10 does not contain "X."

Claim Rejections - 35 USC \$ 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Thompson et al. (Thompson), U.S. Patent 6,368,486 B1.

The Thompson patent discloses the claimed low temperature electrochemical method for removing specie X from compound MX comprising the steps of forming

Application/Control Number: 10/602,056

Art Unit: 1753

an electrolysis system comprising a MX cathode (col. 4, lines 35-37), an anode (col. 4, line 25) and a non-aqueous ionic liquid electrolyte (col. 3, lines 15-16), passing a current through the system to remove X from MX and isolating the reaction product, i.e., the metal M (see columns 3 and 4). The reference further discloses the same metal (see column 3, lines 5-10).

Therefore, since the Thompson patent discloses each and every limitation, the claims are anticipated.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.

Application/Control Number: 10/602,056

Art Unit: 1753

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Thompson as applied to claims above, and further in view of Bales et al. (Bales), U.S. Patent 6,527,938 B2.

The Thompson patent is directed to the production of alkali metal from an alkali halide, and does not disclose the removal of oxygen from titanium dioxide to form titanium metal. The Bales patent is cited to show it is known in the art to remove the oxide from the metal in an electrochemical reduction in non-aqueous solvents as claimed (see col. 4, lines 9-14).

Consequently, the invention as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the disclosure of the Thompson process for the electrolytic treatment of metals in a non-aqueous electrolyte in view of the teachings of the Bales patent, because the Bales patent teaches that oxygen can be removed from metal electrolytically in an non-aqueous electrolyte.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun S. Phasge whose telephone number is

Art Unit: 1753

(571) 272-1345. The examiner can normally be reached on MONDAY-THURSDAY, 7:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nam X Nguyen can be reached on (571) 272-1342. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
